Washington, D.C. 20515

Dear Representatives Roskam, Lance, Neal and Kind:

As Executive Director of AdvaMedDx, I would like to take this opportunity to thank you for introducing legislation that would take an important step in modernizing the diagnostic payment system.

With over 75 member companies represented, AdvaMedDx represents one of the most dynamic and innovative sectors in the health care system. Diagnostics influence as much as 70 percent of health care decision making, and a new generation of diagnostics tests that provide insights at the molecular level is delivering on the promise of personalized medicine.

Your bill, HR 2085, the Diagnostic Innovation Testing and Knowledge Advancement Act of 2013, recognizes the importance of diagnostic tests and their role in critical aspects of health care, including development of personalized medicine. Current Medicare payment policies for diagnostics need significant improvement, and this bill would modernize Medicare reimbursement to better recognize the contribution of modern diagnostics to quality of patient care and better health outcomes.

Your bill supports further discovery and innovation in diagnostics and more timely access for those in need by streamlining the inclusion of new diagnostics in Medicare, and ensuring appropriate reimbursement for diagnostic tests.

We look forward to working with you to ensure that HR 2085 gains wide support in Congress.

Sincerely,

Andrew Fish
Executive Director
